

Encrypted Field Communications

With the Nera WorldCommunicator and a NSK200 handset military personnel are equipped with secure NATO communications at any location.

- Secure GSM DECT Phone
- NATO Secret classification
- Robust – wireless – global

NATO Secret Communications with Global Coverage

Nera has enhanced its successful WorldCommunicator terminal to enable full interworking with the NSK200 handset, avoiding the use of any additional equipment. The result is the only satellite terminal offering an integrated solution for encrypted DECT

The NSK200 handset is designed for organizations that require high-level encrypted security. When combined with the Nera WorldCommunicator, its capability extends beyond the coverage of GSM networks, creating a secure communications solution for global use.

No additional hardware or software

As the Nera WorldCommunicator and NSK200 handset are fully compatible they require no additional hardware or software in order to work together. This enables users to effortlessly connect terminal and handset for secure,

wireless voice communications anywhere. The WorldCommunicator is the only terminal on the market with this capability.

The Nera WorldCommunicator provides

- Secure, wireless, global communications
- Compatibility with NATO approved encryption technology
- A secure, mobile hub for voice and data networking

State-Of-The-Art Encryption Technology

Developed by Kongsberg Defence Communications and Sectra, the NSK200 handset is a combined DECT and GSM telephone for secure, encrypted voice communications. Based on the NATO-approved EINRIDE algorithm, the NSK200 offers the highest level of secure GSM voice communications and is the first system offering protection up to and including the NATO SECRET classification level.

In addition to secure voice the NSK200 can also connect to a computer and serve as an encryption device for transfer of encrypted data. By making the Nera WorldCommunicator compatible with the NSK200, Nera has created a system combining encryption technology approved by NATO with a highly effective mobile communications platform.
